

Feedback – Project Definition and Feature Scenarios

Group Members: Not specified (please include full names and class group in future submissions)

What You Submitted

Your project introduces TecnoMeet, a matchmaking and messaging platform for Tecnocampus students. Students can create profiles, swipe to find matches, and chat once a match is made. The system enforces rules for profile completeness, TCM-only registration, and safe messaging.

What's Good

- You've clearly listed the three core entities: User, Match, and Chat.
- Scenarios are structured in Gherkin format and fully written in English.
- The state-change process (Pending → Matched → Unmatched) is clearly modeled and includes the chat lifecycle.

What Needs Improvement

1. Organize Feature Files by Domain Area

To maintain structure and clarity, break your scenarios into separate .feature files:

user.feature – registration, profile completion

match.feature – swiping, matching, unmatching

chat.feature – chat lifecycle

Feedback – Project Testing

What You Submitted

- 3 user stories: profile creation, swiping, chatting
- 4 business rules: email validation, profile completeness, chat restrictions, unmatching
- 1 state-change process for match and chat lifecycles

What Needs Improvement

While your submission includes many of the core flows, several required test cases are missing for complete validation:

A. Missing Happy Path Scenarios

- User successfully registers
- User successfully updates their profile after registration
- User views a list of new match suggestions
- User views their list of existing matches
- User receives notification after a successful match

B. Validation and Error Handling

- Attempting to register with an invalid email format
- Submitting profile with missing required fields (e.g., no bio or photo)
- Swiping when profile is incomplete (should be blocked)
- Attempting to chat with a user after being unmatched
- Trying to unmatched a user with no active match (should be rejected)

C. State Violations and Edge Cases

- Swiping right on a user already unmatched (should not re-enable chat)
- Reverting from "Matched" to "Pending" (should not be allowed)
- Trying to delete a chat that is not linked to any match
- Multiple swipes from the same user toward another user (should be ignored after first)
